CHAPTER 1: INTRODUCTION AND SUMMARY

This study evaluates the transportation impacts for the proposed Molalla Road Apartments residential development in Woodburn, Oregon. Currently, the parcel of land is a greenfield and adjacent to commercial and industrial uses. The proposed development would construct 231 apartment units. The development would have a single point of access to Molalla Road.

The purpose of this transportation impact analysis (TIA) is to evaluate possible system impacts from the proposed development and, where necessary, recommend mitigation measures on the nearby transportation network. The impact analysis is focused on intersections identified as being in the study area, based on guidance from City and ODOT staff, and shown in **Figure 1**.

Proposed Development

The project sponsor is proposing to build an apartment complex located on the north side of Molalla Road just east of N Pacific Highway (Hwy) at 2145 Molalla Road. The proposed development would build two-hundred thirty-one (231) apartment units. The complex would have direct access to Molalla Road. **Appendix A** provides the site plan of the proposed development. **Table 1** lists important characteristics of the study area and proposed project.

Existing Conditions and Intersection Operations

Transportation impacts associated with the proposed development in the nearby area were evaluated. The following intersections were identified for evaluation:

1. N Pacific Hwy (99E) / Molalla Road (OR 211)
2. Molalla Road (OR 211) / June Way
3. Molalla Road (OR 211) / Proposed Site Driveway
4. Molalla Road (OR 211) / Cooley Road

Table 2 shows the existing intersection operations at the study intersections.

Project Traffic Impact

Construction of the proposed Molalla Road apartments is expected to be completed in 2021. To determine whether the proposed project will result in off-site traffic impacts, future traffic volumes were estimated. **Tables 3 and 4** provide the intersection operations for the future scenarios with and without project traffic.

Key Findings

Key findings associated with the proposed development include the following items:

- The proposed development would generate 78 (20 in, 58 out) AM peak hour trips and 99 (61 in, 38 out) PM peak hour vehicle trips.
- All study intersections are expected to operate within mobility standards with the addition of the proposed site, with the exception of N Pacific Hwy (99E) / Molalla Road (OR 211). This location exceeds the target mobility standard during the PM Peak hour under the existing, background, and total (with project) analysis scenarios.

CHAPTER 2: EXISTING CONDITIONS

This chapter provides documentation of existing study area conditions, including the project site, study area roadway network, and existing traffic volumes and operations.

Project Site

This study evaluates the transportation impacts for the proposed Molalla Road apartments in Woodburn, Oregon. Currently, the parcel of land is a greenfield and adjacent to other housing. The proposed development would construct 231 apartment units. The development would have a single point of access to Molalla Road.

Project Area Roadway Network

Key roadways in the study area are summarized in **Table 5** along with their existing roadway characteristics.

Table 5: Project Area Existing Roadway Characteristics

Roadway	Classification	Ownership	Number of Lanes	Posted Speed	Pedestrian Facilities	Bicycle Facilities
N Pacific Hwy (99E)	Minor Arterial (north of OR 211), Principal Arterial (south of OR 211)	ODOT	4	35 mph	Sidewalks on both sides of the street	Bike lanes on both sides of the street
Molalla Road (OR 211)	Minor Arterial (east of 99E), Principal Arterial (west of 99E)	ODOT	2 (east of 99E), 4 (west of 99E)	25 mph (east if June Way) 35 mph (west of June Way)	Sidewalks on both sides of the street west of 99E. June Way	Local	City	2	25 mph	Sidewalks on both sides	None
Cooley Road	Major Collector	City	2	40 mph	None	None

Existing Traffic Volumes and Operations

Existing AM and PM peak hour traffic operations were analyzed at the following study intersections:

1. N Pacific Hwy (99E) / Molalla Road (OR 211)
2. Molalla Road (OR 211) / June Way
3. Molalla Road (OR 211) / Proposed Site Driveway
4. Molalla Road (OR 211) / Cooley Road

Peak hour traffic counts were collected on Thursday, September 12th, 2019. The peak hour traffic volumes analyzed under existing conditions are shown in **Figure 2 and Figure 3**, with the detailed two-hour traffic counts included in **Appendix B.** The AM system peak hour was identified as 7:05 – 8:05 AM, and the PM system peak hour as 4:10 – 5:10 PM.

ODOT has requested that a minimum of one vehicle be represented for each permitted movement in the analysis to ensure the software used (Synchro and SimTraffic) accurately calculate the resulting operational values. The field collected data did not record any vehicles for the following movements:

- Westbound left at Molalla Road / June Way (AM Peak Hour – Existing and Background Conditions Only)
- Southbound left at Molalla Road / Cooley Road (AM Peak Hour)
- Westbound right at Molalla Road / Cooley Road (PM Peak Hour)
- Northbound thru at Molalla Road / Cooley Road (PM Peak Hour)

One vehicle for each of these movements has been added to the analysis models for all scenarios and is reflected in the reports in the appendix. Since these values were not field observed, they are not shown in the Figures throughout the report. Additionally, all analysis scenarios assume a saturation flow rate of 1750 pcphgl, as requested by ODOT.

Figure 3: 2019 PM Peak Hour Existing Conditions

Existing Operating Conditions

Existing traffic operations at the study intersections were evaluated for the AM and PM peak hours using 30th highest hour volumes based on the Oregon DOT Analysis Procedure's Manual methodology. The estimated V/C ratio of each study intersection is shown in **Table 6** and is based on the 2000 Highway Capacity Manual[1] methodology for signalized intersections and 2016 Highway Capacity Manual methodology[2] for unsignalized intersections. **Appendix C** provides detailed reports summarizing these results. **Appendix D** provides information on how 30th highest hour volumes were developed for analysis.

All study intersections meet existing mobility standards, with the exception of N Pacific Hwy (99E)/ Molalla Road (OR 211) in the PM Peak Hour.

Crash Analysis

The five most recent years of crash records (Jan 1, 2013- Dec 31, 2017) for the study area were obtained from Oregon Department of Transportation (ODOT's) online database. A copy of these records is provided in **Appendix H**. Crashes recorded within approximately 250 feet of the study intersection are grouped with that intersection for analysis purposes.

During the five years evaluated, seventy-seven (77) crashes occurred at the study area intersections. The study intersection with the highest frequency of crashes over the five year period was N Pacific Hwy

(99E) / Molalla Road (OR 211) with a total of seventy-two (72) crashes. The most common crash type at the N Pacific Hwy (99E) / Molalla Road (OR 211) intersection was rear-end collisions. There were no fatal crashes recorded at the study intersections, however there was one Injury A (incapacitating injury) crash recorded. There are three (3) recorded crashes at the intersection of Molalla Road (OR 211) / June Way and two (2) recorded at Molalla Road (OR 211) / Cooley Road.

CHAPTER 3: BACKGROUND TRAFFIC

Construction of the proposed Molalla Road apartments is expected to be completed in 2021. To account for traffic growth from 2019 to 2021, a 1.4% growth rate was used to forecast the future background traffic volumes on roads within the study area. Growth rate calculations are provided in **Appendix D**.

The City of Woodburn identified that the Pacific Valley Apartments should be treated as "in-process", with the developments trips included in the background and total traffic volumes. The Pacific Valley Apartments study identified trips traveling through one of the study intersections for the Molalla Road Apartments; North Pacific Highway (OR99E)/Molalla Road. These in-process trips are identified in **Figures 4 and 5**. Documentation for the Pacific Valley Apartments is included in **Appendix E**. Background traffic volumes are show in **Figures 6 and 7**.

Background Intersection Operations

Background traffic operations at the study intersections were determined based on the 2016 Highway Capacity Manual methodology[3] for unsignalized intersections and the 2000 Highway Capacity Manual methodology for signalized intersections[4]. The estimated V/C ratio of each study intersection is shown in **Table 9**. **Appendix F** provides detailed reports summarizing these results.

Table 9 lists intersection operations after accounting for the assumed traffic volume growth. All study intersections meet mobility standards, with the exception of N Pacific Hwy (99E)/ Molalla Road (OR 211) in the PM Peak Hour.

CHAPTER 4: PROJECT IMPACTS

This chapter reviews the impacts that the proposed 231 unit apartment complex would have on the study area transportation system. The focus of the impact analysis is on the following study intersection:

1. N Pacific Hwy (99E) / Molalla Road (OR 211)
2. Molalla Road (OR 211) / June Way
3. Molalla Road (OR 211) / Proposed Site Driveway
4. Molalla Road (OR 211) / Cooley Road

Trip Generation

Trip generation is used to estimate the number of vehicle trips added to the roadway network by a development during a specified period. In this case, the AM and PM peak hour periods are studied. Trip generation estimates are established data and methodology provided by the Institute of Transportation Engineers (ITE).[5] **Table 10** lists the peak hour vehicle trip generation estimates for this development.

Table 10: Molalla Road Apartments Trip Generation Summary

Land Use (ITE Codes)	Dwelling Units	Time Period	Trip Generation Rate	Peak Hour Trips		
				In	Out	Total
Multi-Family Mid-Rise (221)	231	AM Peak	Equation	20	58	78
TOTAL AM PEAK HOUR				**20**	**58**	**78**

TOTAL PM PEAK HOUR				**61**	**38**	**99**

[5] *Trip Generation, 9th Edition*, Institute of Transportation Engineers, 2012.

Trip Distribution

Trip distribution provides an estimation of where trips from the development originate and end on the study area network. This is represented as percentages where large portions of the trips generated enter and exit the project study area. Trip distribution patterns are calculated based on a combination of existing count data and recommendations from the City and ODOT. The trip distribution percentages are shown in **Figure 8** and resulting site distributed trips are summarized in **Figure 9 and Figure 10.**

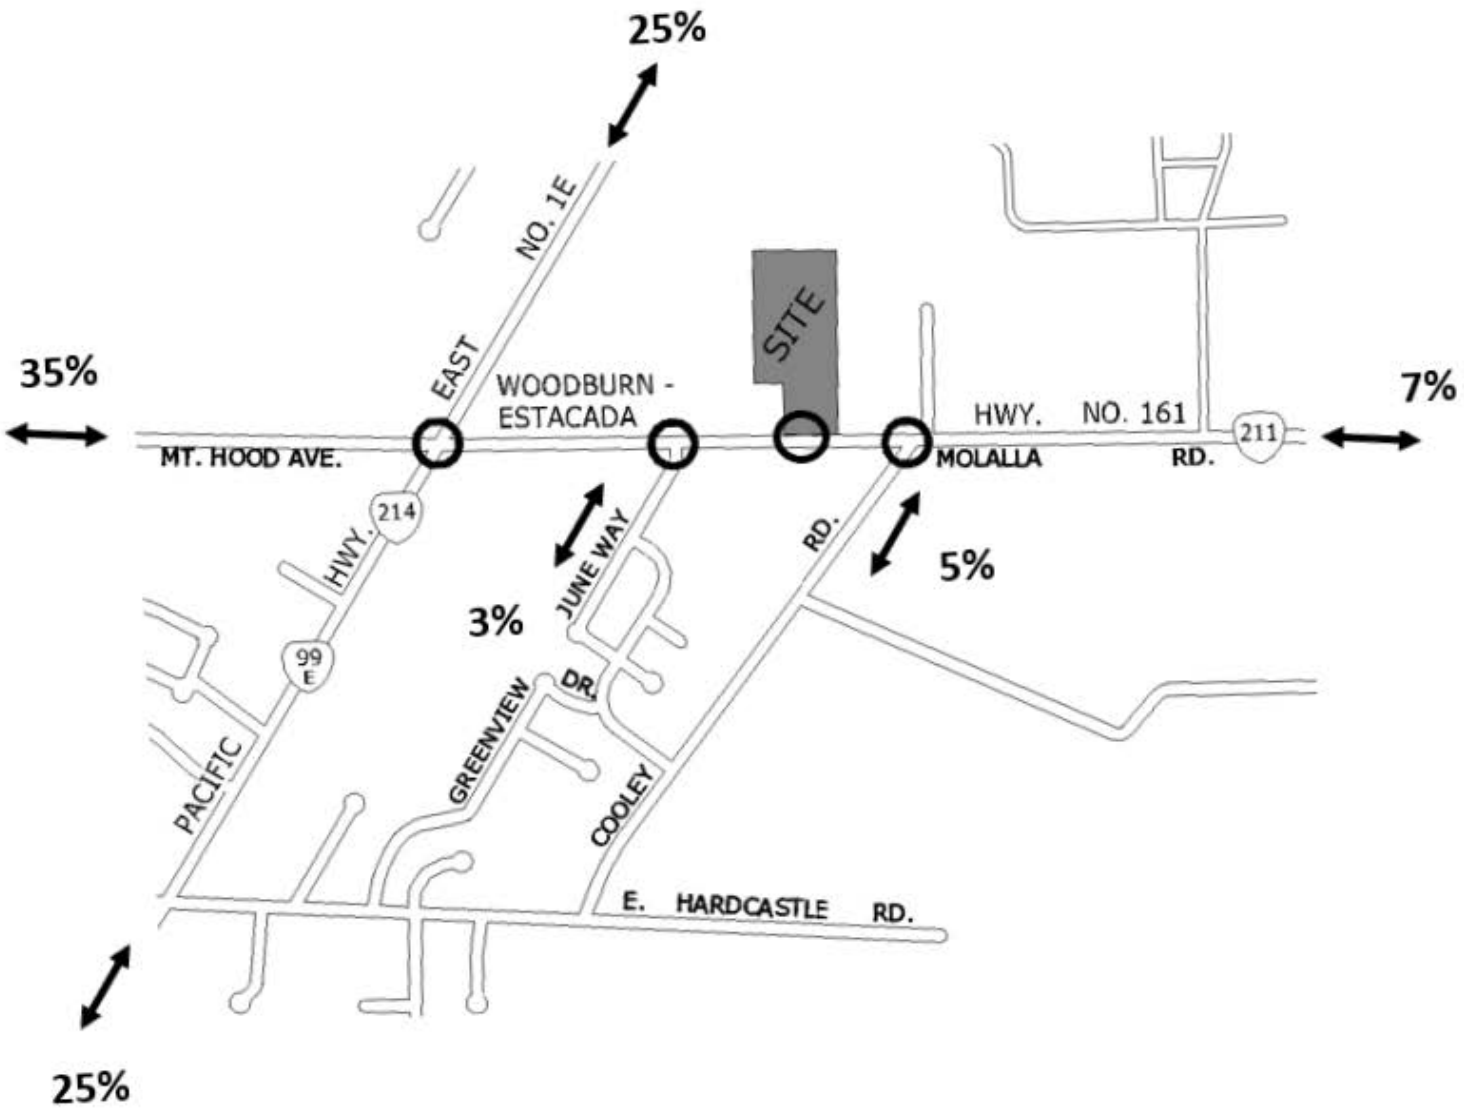

Figure 8: Trip Distribution

Figure 9: AM Peak Hour Site Generated Volumes

Figure 10: PM Peak Hour Site Generated Volumes

Future Traffic Volumes with the Proposed Development

The estimated trips associated with the proposed development were added to the background volumes to estimate the total traffic scenario traffic volumes. **Figure 11 and Figure 12** show the 2021 total traffic volumes used for analysis.

Figure 11: 2021 AM Peak Hour Total Traffic Volumes

Figure 12: 2021 PM Peak Hour Total Traffic Conditions

Table 11 lists the study intersection total traffic operating conditions for the AM and PM peak hours. Traffic operations at the study intersections were determined for the peak hours based on the 2016 Highway Capacity Manual methodology[6] for unsignalized intersections and the 2000 Highway Capacity Manual methodology for signalized intersections[7]. The estimated V/C ratio of each study intersection is shown in **Table 11. Appendix F** provides detailed reports for the operational results.

Based on the operational analysis, all study intersections will function within their applicable mobility standards with the exception of N Pacific Hwy (OR 99E) at Molalla Road (OR 211), which exceeds target mobility standards during the P.M. Peak Hour scenario.

Queuing Analysis

A queuing analysis is requested by ODOT for any intersection with a V/C that exceeds 0.70. **Table 12** provides queuing analysis for N Pacific Hwy (99E)/Molalla Road (OR 211) using SimTraffic calibrated per the ODOT Analysis and Procedures Manual Version 1. Both the northbound lefts and westbound lefts exceed available storage, however, these movements do not serve trips to or from the proposed site.

Site Entrance Right-Turn Lane Evaluation

Molalla Road at the proposed site approach was evaluated for a dedicated right-turn lane using criteria from Section 12.2 of the ODOT Analysis Procedures Manual (AMP) Version 2. The provided criteria evaluates the need for a right turn lane based on volumes, crash experience, and special cases. A right-turn lane is not recommended based on the following criteria.

Vehicular Volumes

The vehicular volume criteria looks at the intersecting volume of the roadway and the proposed driveway. The PM Peak hour represents the highest use case, with seven westbound right turning vehicles entering the site (as opposed to 2 in the AM peak hour). The design hourly volume for the westbound approach (including right turn movements) is 412 for the PM Peak hour. Using the Exhibit 12-2 from the ODOT APM, the location does not meet warrants for a dedicated right turn lane at the entrance.

Crash Experience

The five most recent years of crash records (Jan 1, 2013- Dec 31, 2017) for the study area were obtained from Oregon Department of Transportation (ODOT's) online database. A copy of these records is provided in **Appendix H**.

Two crashes are recorded along the frontage of the proposed site. An Injury A, head-on collision was recorded on June 19th, 2014, at 5:24 PM. The notes from the crash record indicate the driver was operating the vehicle while drowsy/fatigued/asleep and driving with a revoked/suspended license. The driver of the vehicle departed from their travel lane, resulting in the crash. This crash appears to be the result of driver behavior/error.

A second crash was recorded September 15th, 2016, at 4:24 PM, and is documented as a property damage only, fixed/other-object crash. No additional details are provided in the crash data base.

Right-turn lanes can be used to mitigate rear-end crashes. No rear-end crashes are recorded along the frontage of the property. A right-turn lane is not recommended based on crash experience.

Special Cases

The proposed access is not located near any passing lanes or railroad crossings. The proposed access is located on a straight horizontal alignment of roadway. It is not currently recommended that a right turn lane be installed based on special cases criteria.

Key Findings

The key traffic impact findings associated with the proposed development include:

- The proposed development would generate 78 (20 in, 58 out) AM peak hour trips and 99 (61 in, 38 out) PM peak hour vehicle trips.
- All study intersections are expected to operate within mobility standards with the addition of the proposed site, with the exception of N Pacific Hwy (99E) / Molalla Road (OR 211). This location exceeds the target mobility standard during the PM Peak hour under the existing, background, and total (with project) analysis scenarios.

APPENDIX D:
METHODS AND ASSUMPTIONS MEMORANDUM

MEMORANDUM

DATE: **September 26, 2019**

TO: **Eric Lilequist/City of Woodburn, Dago Garcia/ City of Woodburn, Casey Knecht/ODOT Region 2**

FROM: **Tegan Enloe, PE/Enloe Consulting, LLC**

SUBJECT: **Molalla Road Apartments Traffic Impact Analysis: Methods & Assumptions**

Background

The applicant is proposing to build an apartment complex located on the north side of Molalla Road just east of N Pacific Highway (Hwy) at 2145 Molalla Road. The proposed development would build two-hundred thirty-one (231) apartment units. The complex would have direct access to Molalla Road.

Project Study Area

The project study area is outlined in Figure 1. Study intersections are identified with circles on the figure and include:

1. N Pacific Hwy (99E) / Molalla Road (OR 211)
2. Molalla Road (OR 211) / June Way
3. Molalla Road (OR 211) / Proposed Site Driveway
4. Molalla Road (OR 211) / Cooley Road

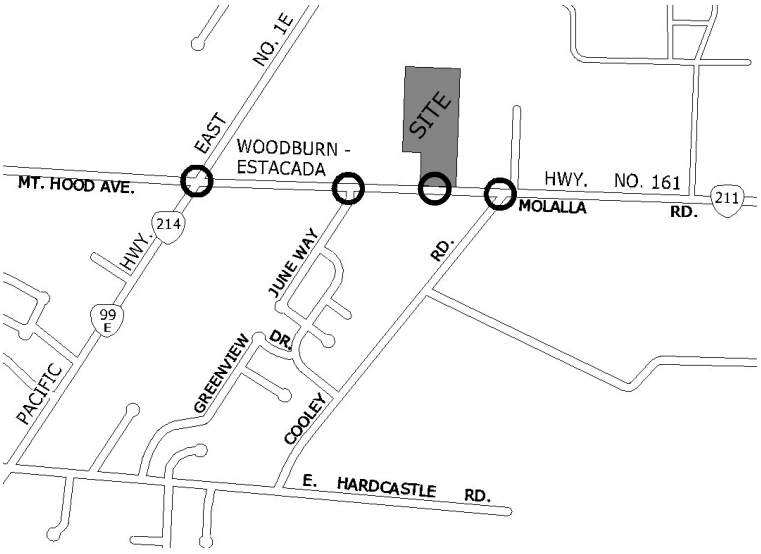

Figure 1: Study Area

Table 1 outlines study intersection ownership and applicable mobility standards.

Notes:
ODOT Standards based on OHP, Table 6 for Regional Highway, non-MPO less than or equal to 35 mph

Molalla Road (OR 211) is also known as Woodburn-Estacada Hwy No. 161

N Pacific Hwy (O 99E) is also known as Pacific Hwy No. 081

Scenarios

The traffic analysis will be completed under the assumption that full build out and site occupancy will occur in 2021.

The following analysis scenarios are proposed for review:

- 2019 Existing Conditions, AM Peak Hour
- 2019 Existing Conditions, PM Peak Hour
- 2021 Background Traffic, AM Peak Hour
- 2021 Background Traffic, PM Peak Hour
- 2021 Total Traffic (Background + Site), AM Peak Hour
- 2021 Total Traffic (Background + Site), PM Peak Hour

A simulation-based queue length analysis will be provided for any intersections that exceed 0.70 volume-to-capacity ratio.

Analysis Volumes

AM and PM traffic counts for the study area were conducted on Thursday, September 12th, 2019. The intersection of North Pacific Highway (OR 99E)/Molalla Rd is separated from the remaining study area by a large driveway. The remaining intersections are separated by a few minor driveways. As such, the network will only be balanced between the intersections Molalla Road/June Way and Molalla Road (OR 211) /Cooley Road. 30th Highest Volume (HV) values will be used for all analysis scenarios.

Seasonal Adjustment Factor

To establish the 30th HV values for the analysis, the seasonal adjustment factor is calculated using the ODOT Characteristic Table, which identifies ATR 24-001 (Woodburn) as a representative ATR for the study area. Table 2 shows the seasonal adjustment factor calculations.

Table 2: Seasonal Adjustment Factor Calculation

	2017	2016	2015	2014	2013	Average
Peak Month	~~117~~ (August)	~~111~~ (June)	113 (June)	112 (July)	112 (July)	112
Count Month (September)	~~109~~	106	~~105~~	109	107	107
						Average Seasonal Adjustment Factor: 1.05
Note: strike through values represent the highest and lowest values and were excluded from the average.						

Future Forecasting

A growth rate for the study area is developed using ODOT's 2037 Future Volume Tables. Table 3 outlines the proposed Future Volume Table data points. An annual growth rate of 1.4% is proposed to be applied linearly to the existing volumes. This value is achieved by average of the two calculated values for North Pacific Highway (OR 99E), which represents the highest order roadway in the study area.

Table 3: Future Volume Table

Highway	Mile Point	Location	2016	2037	RSQ	21 Year Factor	Annual Rate

081 (OR99E)	31.80	0.10 mile south of Woodburn-Estacada Highway (OR211)	19500	26600	MODEL	1.36	1.7%
140	39.24	0.05 mile west of Pacific Highway East (OR99E)	13800	15800	MODEL	1.14	0.7%
161	0.15	0.15 mile east of Pacific Highway East (OR99E) and Hillsboro-Silverton Highway	8800	12300	0.5248	1.40	1.9%
							Average Annual Rate: 1.4%

Trip Generation

Trip generation values for the proposed development are provided in Table 4. These values will be added to the 2021 Background Traffic to develop 2021 Total Traffic volumes.

Table 4: Trip Generation

Land Use (ITE Codes)	Dwelling Units	Time Period	Trip Generation Rate	Peak Hour Trips		
				In	Out	Total
Multi-Family Mid-Rise (221)	231	AM Peak	Equation	20	58	78
TOTAL AM PEAK HOUR				**20**	**58**	**78**
Multi-Family Mid-Rise (221)	231	PM Peak	Equation	61	38	99
TOTAL PM PEAK HOUR				**61**	**38**	**99**

Trip Distribution

Trip distribution patterns are calculated based on a combination of existing count data and recommendations from the City and ODOT.

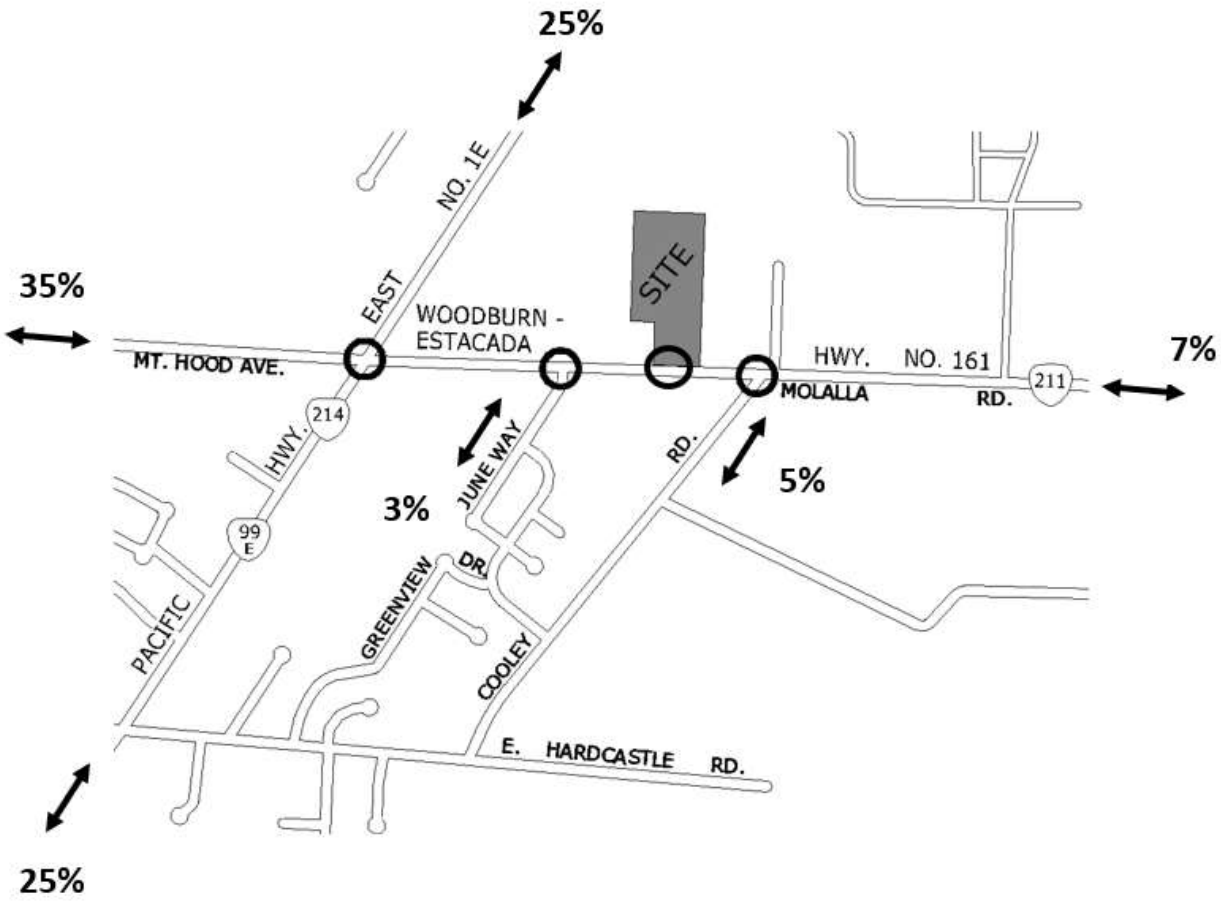

Figure 2: Proposed Trip Distribution

In Process Developments

Conversations with City and ODOT staff have indicated that trips at the intersection of North Pacific Highway (OR 99E)/Molalla Road from the Pacific Valley Apartments should be included as “in-process”. In process trips will be included in the Background and Total Traffic analysis scenarios.

Next Steps

If you have any questions or comments regarding the proposed approach, please contact our Project Manager, Tegan Enloe, PE, at 503.805.8115 or enloeconsulting@gmail.com.

Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirement, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.
