DATE: October 6, 2020

TO: Colin Cortes / Senior Planner, City of Woodburn, OR

FROM: Tegan Enloe, PE / Enloe Consulting, LLC

SUBJECT: Land Use Change Request for 1160 E Jefferson Street

Background

Enloe Consulting, LLC, completed the Molalla Road Apartments Traffic Impact Analysis (TIA) on January 13, 2020. The study reviewed the associated impacts with the proposed Molalla Road Apartments residential development in Woodburn, Oregon. Currently, the parcel of land is a greenfield and adjacent to commercial and industrial uses. The proposed development would construct 231 apartment units. The development would have a single point of access to Molalla Road.

Following completion of the TIA, the City of Woodburn requested an update to the crash analysis to include a crash rate analysis with the newly available most recent five years of crash data. This addendum will provide an updated safety analysis for the study intersections from the TIA. These intersections include the following locations and are shown in **Figure 1**.

1. N Pacific Hwy (99E) / Molalla Road (OR 211)
2. Molalla Road (OR 211) / June Way
3. Molalla Road (OR 211) / Proposed Site Driveway
4. Molalla Road (OR 211) / Cooley Road

Figure 1: Study Area

Study Intersections

The five most recent years of crash records (Jan 1, 2014- Dec 31, 2018) for the study area were obtained from Oregon Department of Transportation (ODOT’s) online database. While crash data is also available from ODOT for the calendar year 2019, it is considered preliminary and subject to change and is not recommended for use. A copy of these records is provided in **Attachment A**. Crashes recorded within approximately 250 feet of the study intersection are grouped with that intersection for analysis purposes.

During the five years evaluated, seventy-nine (79) crashes occurred at the existing study area intersections. The study intersection with the highest frequency of crashes over the five-year period was N Pacific Hwy (99E) / Molalla Road (OR 211) with a total of seventy-seven (77) crashes. The most common crash type at the N Pacific Hwy (99E) / Molalla Road (OR 211) intersection was rear-end collisions. There were no fatal crashes recorded at the study intersections. Three Injury A (incapacitating injury) crashes are recorded at this location and discussed in more detail in subsequent sections.

There is one (1) recorded crash at the intersection of Molalla Road (OR 211)/ June Way and zero (0) recorded at Molalla Road (OR 211) / Cooley Road.

Table 1: Number of Crashes at Study Intersections

Study Intersection	2014	2015	2016	2017	2018	Total	AADT	Crash Rate
N Pacific Hwy (99E) / Molalla Road (OR 211)	12	13	18	13	21	77	3,147	1.34
Molalla Road (OR 211) / June Way	-	1	1	-	-	2	9,120	0.12
Molalla Road (OR 211) / Cooley Road	-	-	-	-	-	0	9,940	-
Total	12	14	19	13	21	79	-	-

Note: AADT is estimated using the industry standard of practice that the intersection PM Peak Hour traffic is approximately 10% of the AADT. The PM Peak Hour traffic used reflects raw counts.

Table 2: Crash Type and Severity by Study Intersection (2013 - 2017)

Collision Type	N Pacific Hwy (99E) / Molalla Road (OR 211)	Molalla Road (OR 211) / June Way	Molalla Road (OR 211) / Cooley Road
Angle	2 (Injury C)	-	-
Backing	3 (2 Injury C, 1 PDO)	-	-
Fixed Object or Other-object	4 (2 Injury A, 2 PDO)	-	-
Head-On	2 (1 Injury B, 1 PDO)	-	-
Non-Collision	1 (PDO)	-	-
Pedestrian	3 (2 Injury B, 1 Injury C)	-	-
Rear-End	51 (1 Injury B, 29 Injury C, 21 PDO)	1 (Injury C)	-
Sideswipe-Overtaking	3 (PDO)	-	-
Turning Movement	8 (1 Injury A, 2 Injury B, 2 Injury C, 3 PDO)	1 (Injury B)	-
Total	77	2	0

Note: PDO = Property Damage Only crash

Proposed Site Access

Two crashes are recorded along the frontage of the proposed site. An Injury A, head-on collision was recorded on June 19th, 2014. The notes from the crash record indicate the driver was operating the vehicle while drowsy/fatigued/asleep and driving with a revoked/suspended license. The driver of the vehicle departed from their travel lane, resulting in the crash. This crash appears to be the result of driver behavior/error. A second crash was recorded September 15th, 2016, and is documented as a property damage only, fixed/other-object crash. No additional details are provided in the crash data base.

High Severity Crashes

Two fixed-object collisions at the intersection of N Pacific Hwy (99E) / Molalla Road (OR 211) are recorded as Injury A collisions. The first occurred on June 4, 2016, and is categorized as “reckless driving”, “road rage”, and “driving in excess of posted speed”. The driver hit a curb. The second occurred on October 1, 2018, and is characterized as a result of a “physical illness”. The driver hit a median barrier. The third Injury A crash at this location occurred on September 14, 2018, and is recorded as a turning movement crash. This crash is categorized as “reckless driving”, “Disregarded traffic signal”, and “Drove left of center on two-way road; straddling the center line”.

An additional Injury A crash is recorded on Molalla Road along the frontage of the proposed site. This head-on collision was recorded on June 19th, 2014, and is discussed in more detail in the *Proposed Site Access* section.

Vulnerable Road Users

No crashes involving bicyclists were recorded during the five analysis years at the study locations. Three pedestrian crashes were recorded at the intersection of N Pacific Hwy (99E) / Molalla Road (OR 211). Two of the crashes were recorded in 2014 on June 13, 2014, and August 13, 2014. The third is recorded on July 13, 2016. All three crashes are categorized as “did not yield right-of-way”.

Crash Rate Analysis

Crash rates are calculated for the three existing study intersections. The intersection of Molalla Road (OR 211) / Cooley Road does not have any recorded crashes during the five-year analysis period, and therefore does not have a calculated rate. The remaining two intersection crash rates are compared with ODOT’s 90th percentile crash rates from Exhibit 4-1 of ODOT’s Analysis Procedures Manual (APM). The intersection of Molalla Road (OR 211) / June Way is compared to a 90th percentile crash rate of 0.131; the calculated rate for the intersection of does not exceed that. The 90th percentile crash rate for comparison with N Pacific Hwy (99E) / Molalla Road (OR 211) is 0.477, and the calculated rate of 1.34 exceeds that. This indicates that the intersection of N Pacific Hwy (99E) / Molalla Road (OR 211) currently experiences more crashes than would be expected for one of similar nature when compared to a reference population throughout Oregon.

ODOT SPIS

The Oregon DOT maintains a Safety Priority Index System that reviews locations based on crash data. The following mile points (MP) on the ODOT highway system were used to define the safety study area:

- OR 99E (Hwy 81): MP 31.65 – 31.74
- Molalla Rd (Hwy 140): MP 39.24 – 39.29
- Molalla Rd (Hwy 161): MP 0 – 0.44

Within this defined study area, only one 2018 SPIS location is identified; Molalla Rd (Hwy 140) between MP 39.09 to 39.28. This SPIS site is in the 95 percent SPIS list with a score of 77.42.

Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirement, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.

Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirement, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.

Disclaimer: The information contained in this report is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate. Note: Legislative changes to DMV's vehicle crash reporting requirement, effective 01/01/2004, may result in fewer property damage only crashes being eligible for inclusion in the Statewide Crash Data File.

140: HILLSBORO-SILVERTON

Highway 140 ALL ROAD TYPES, MP 39.24 to 39.29 01/01/2018 to 12/31/2018, Both Add and Non-Add mileage
